

Lino[®] 3D web

Product Configuration with Parametric 3D Visualization on the Web!

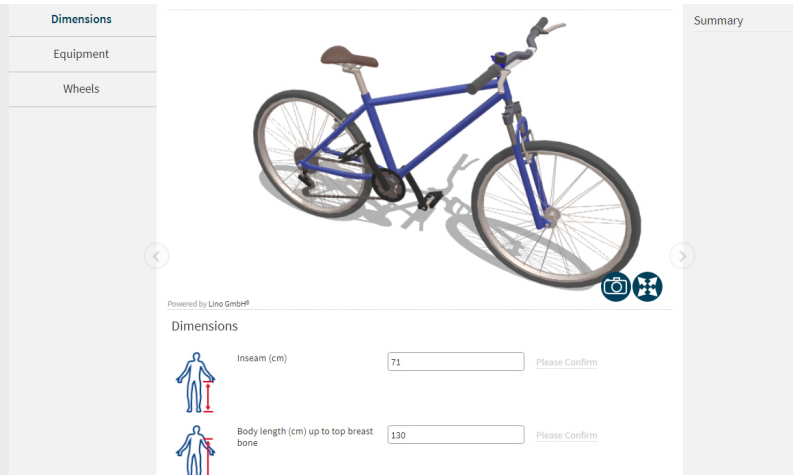

Lino[®] 3D web is the revolutionary parametric 3D product design and quotation tool for the web in combination with Tacton Sales Automation!

As of right now, you can empower your sales team and end customers with a powerful 3D visualization tool for quotation preparation, product layout and configuration as part of your configurator.

True parametric models in the web view enable 3D representation of all variants for even complex models during the actual configuration. The direct integration with Tacton Sales Automation ensures you receive the maximum leverage from your Tacton investment by letting you use your existing Solidworks models on the web simply and easily.

The Solidworks export functionality automatically converts the geometry into the web format, including all Solidworks standard materials used, for a highly realistic representation. The export retains all existing relationships between the CAD geometry and an existing Tacton rule set completely, so that you can put them up on the web right away with no modifications!

Lino[®] 3D web ensures plugin-free 3D viewing in web browsers and on mobile devices. Additionally, the Lino[®] Configuration API lets you integrate the 3D viewer in webshops and company websites simply and easily.

POSSIBLE APPLICATIONS

- Interactive online product configurator
- 3D visualization for “tangible” representation of the desired product for the end customer
- Automated generation of CAD data
- Simple adaptation of the layout from the configurator user interface to the layout of your existing website and your corporate design
- Seamless import of data from the online product configurator into the quotation and order processes
- Lino[®] Configuration API for simple integration of the configurator in websites, webshops, commercial platforms and other web-based system software
- Compatible with all widely used shop systems
