

Lino[®] PDM pro

Integration for PDM/PLM systems

The maximum benefit of a Design Automation solution can only be achieved with good process integration. Lino[®] PDM pro helps you to optimally integrate your Design Automation solution with the workflow of your PDM system.

The Design Automation software from Tacton Systems enables you to configure even very complex products within minutes and to automatically emboss or map them in the Solidworks CAD system including all components – in full detail and including automatically generated production documents.

But who helps to find out whether certain products or components of them have been configured identically in the past and could therefore be easily reused? With Lino PDM pro, you can integrate a PDM system highly effectively with the Tacton Design Automation solution.

Lino PDM pro is currently available with adapters for four PDM systems. The range of functions in the area of document creation is different for all adapters. The features overview to the right shows an example of the functional range of the Solidworks PDM adapter. In principle, however, all PDM systems can be controlled by an adapter developed by Lino.

AVAILABLE PDM INTEGRATIONS

SOLIDWORKS PDM (Dassault Systèmes SE)

PRO.FILE (PROCAD GmbH & Co.KG)

keytech PLM (keytech Software GmbH)

SAP PLM (CIDEON Software & Services GmbH & Co. KG)

Other integrations on request.

FEATURES

- Finding and using already identically configured products or components
- Automatic document creation with check-in and number assignment from the PDM system
- From duplicate checking to document creation with just one mouse click
- A large number of new variants can be created very quickly in batch operation
